

Cost of new solar & wind vs paid-for coal

(LCOE and operating costs in US dollars per kilowatt hour)

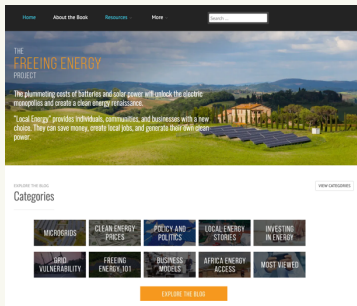

FREEING
ENERGY

It is now cheaper to build a brand new solar or wind project than continue operating an existing coal plant, even one whose construction has been fully paid and depreciated.

The Freeing Energy Project

- ⚡ The mission of the Freeing Energy Project is to educate and inspire energy fans towards accelerating the transition to clean, sustainable energy like solar, wind, and batteries.
- ⚡ The project has a deep focus on the consumerization of energy technology and its ability to enable affordable, reliable, self generation, or as we call it, local energy.
